

Proposed Instructions for the RISC-V Base P Extension
Annex A
Correspondences with Earlier P Extension Proposal

John Hauser

September 15, 2024

Warning! This document is based on a draft proposal and is not an official document of the RISC-V International Association. The Base P extension that is eventually ratified by RISC-V International is liable to differ from this document in many details.

In this document, I show how the instructions from my *Proposed Instructions for the RISC-V Base P Extension* correspond to instructions of the earlier P extension proposal.

The tables that follow are organized to list the new proposed instructions in close to the same order as the main document.

1 Instructions without multiplications

RV32/RV64		RV32/RV64	
New instruction	Earlier equivalent	New instruction	Earlier equivalent
PLI.B	—	PLI.H PLUI.H	— —

REV16	—

RV64	
New instruction	Earlier equivalent
PACK	PACK
PACKBT	PKTB32 (*1)
PACKTB	PKBT32 (*1)
PACKT	PACKU

(*1) Swap the source operands.

RV64	
New instruction	Earlier equivalent
ZIP8P	—
ZIP8HP	—
UNZIP8P	—
UNZIP8HP	—

RV64	
New instruction	Earlier equivalent
ZIP16P	—
ZIP16HP	—
UNZIP16P	—
UNZIP16HP	—

RV32/RV64	
New instruction	Earlier equivalent
ABS	—
CLZ	CLZ
CLS	—
REV	REV
? SLXI	—
? SLX	—
? SRXI	≈ FSRI (*1)
SRX	—
MVM	≈ CMIX (*2)
MVMN	≈ CMIX (*3)
MERGE	≈ CMIX (*4)

RV64	
New instruction	Earlier equivalent
ABSW	≈ KABSW (*5)
CLZW	—
CLSW	—

(*1) The earlier FSRI exists only for RV32. With an immediate operand i in the range 0–31 inclusive, RV32's new SRXI $rd,rs1,i = FSRI\ rd,rd,rs1,i$.

(*2) New MVM is the same as earlier CMIX with source operand $rs3 = rd$.

(*3) New MVMN $d,a,b =$ earlier CMIX d,b,d,a (that is, with CMIX's $rs1, rs2,$ and $rs3$ operands = MVMN's $rd, rs2,$ and $rs1,$ respectively).

(*4) New MERGE $d,a,b =$ earlier CMIX d,d,b,a (that is, with CMIX's $rs1, rs2,$ and $rs3$ operands = MERGE's $rs2, rd,$ and $rs1,$ respectively).

(*5) The new ABSW gives an unsigned result, while the earlier KABSW delivers a signed result, with saturation.

RV32, register-pair destination			Earlier equivalent
New instruction

PMACC.W.H pp	\approx KMA pp (*2, 4)
PMACCSU.W.H pp	—
PMACCU.W.H pp	—

RV32	
New instruction	Earlier equivalent
MUL.H nn	SM pp 16 (*1)
MULSU.H nn	—
MULU.H nn	—
MACC.H nn	\approx KMA pp (*1, 4)
MACCSU.H nn	—
MACCU.H nn	—

RV64	
New instruction	Earlier equivalent
MUL.W nn	SM pp 32 (*1)
MULSU.W nn	—
MULU.W nn	\approx MULR64 (*5)
MACC.W nn	\approx KMA pp 32 (*1, 4)
MACCSU.W nn	—
MACCU.W nn	—

RV32/RV64	
New instruction	Earlier equivalent
PM2ADD.H	\approx KMDA (*4)
PM2ADDA.H	\approx KMADA (*4)
PM2ADDSU.H	—
PM2ADDASU.H	—
PM2ADDU.H	—
PM2ADDAU.H	—
PM2ADD.HX	\approx KMXDA (*4)
PM2ADDA.HX	\approx KMAXDA (*4)
PM2SADD.H	KMDA
PM2SADD.HX	KMXDA
PM2SUB.H	SMDRS
PM2SUBA.H	\approx KMADRS (*4)
PM2SUB.HX	SMXDS (*3)
PM2SUBA.HX	\approx KMAXDS (*3, 4)

PM2ADD.W	\approx KMDA32 (*4)
PM2ADDA.W	SMAR64
PM2ADDSU.W	—
PM2ADDASU.W	—
PM2ADDU.W	—
PM2ADDAU.W	UMAR64
PM2ADD.WX	\approx KMXDA32 (*4)
PM2ADDA.WX	\approx KMAXDA32 (*4)
PM2SUB.W	SMDRS32
PM2SUBA.W	\approx KMADRS32 (*4)
PM2SUB.WX	SMXDS32 (*3)
PM2SUBA.WX	\approx KMAXDS32 (*3, 4)

- (*1) For the elements to select from each source operand, the earlier instruction has p being ‘B’ or ‘T’, corresponding to an n of ‘0’ or ‘1’.
- (*2) For the elements to select from each source operand, specified by p , the earlier instruction has ‘B’ or ‘T’ instead of ‘E’ or ‘O’.
- (*3) Swap the source operands.
- (*4) The new instruction does not saturate the addition(s), while the earlier instruction does.
- (*5) The earlier MULR64 is the same as the new MULU.W00 only.

RV32/RV64		RV64	
New instruction	Earlier equivalent	New instruction	Earlier equivalent
PM4ADD.B	—	PM4ADD.H	—
PM4ADDA.B	SMAQA	PM4ADDA.H	SMALDA
